Abstract (en)

[origin: EP2463473A2] The device has a set of guide elements (7) protruding at narrow sides (3a) of lamellae (3) and movable along respective guiding grooves (5) of adjacent guide rails (1) in a controlled manner, where the lamellae are swingable by the guide elements about a swivel axis (R) running parallel to a longitudinal direction of the lamellae. The guiding grooves are formed at a guide body (11) that is supported at a base body (9) transverse to the guiding grooves toward the swivel axis in variable location and/or variable form. The guide body is formed as an extrusion profile made of plastic.
