Abstract (en)

[origin: EP2463474A2] The personnel airlock has a passage formed between the lock housing and a control and limiting barrier, and a leaf blocking element formed in the passage. A display and control panel (8) is arranged on the safe side of the lock (9) and is fitted into an opening in the wall of the lock casing. The display and control panel set opposite to the opening in the housing wall is reset such that the opening is completely closable with a diaphragm when the security gate is not in use.
