Abstract (en)

[origin: EP2463586A1] The method involves designing a push-in cooked product holder (5) as a heated push-in cooked product holder for generating steam. The push-in cooked product holder is arranged in a cooking chamber (3) of a cooking device (1) and activated and filled with water (W). Another cooked product holder (6) i.e. non-heated cooked product holder, is positioned in the cooking chamber over the former cooked product holder. A supporting surface is allowed to support a grill for partially covering a shell-shaped water receiving region (7). Independent claims are also included for the following: (1) a push-in cooked product holder comprising a shell-shaped water receiving region (2) a cooking device for operating a heated push-in cooked product holder, comprising a temperature sensor.
