Abstract (en)  
[origin: EP2463614A1] The device (1) has a connecting rod (10) connected to a door (3) and a mobile panel (2) by pivots (10a, 10b). Orthogonal projection of the axis of one of the pivots in a plane of the door is located between another pivot and an orthogonal projection in the plane of the door of vertical axis (5a) of hinges (5). A fixed offset protective panel (8) secured to the door includes a lateral edge (8a) extending beyond an external edge (3a) of the door parallel to a rotation axis (5b) of door. The panel has another lateral edge (8b) contiguous with the mobile panel when the door is closed.
