Abstract (en)

[origin: WO2011018139A1] The invention relates to a cleaning machine for bottles or similar containers (2), comprising a container conveying system having container cells (5), each receiving a container (2), wherein the container cells (5) form at least one container cell group, in which a plurality of container cells (5) consecutively follow each other in a conveying direction (A) in an arrangement forming a cohesive loop, comprising at least one treatment zone (1), with the containers (2) being moved past said zone by the conveyor system for spray-washing particularly the outer or lateral surface of said containers, and comprising a slide structure or a slide grate (9) having at least one sliding surface (13, 13c) for the containers (2) at the treatment zone below the movement path of the container cells (5).
