Abstract (en)
[origin: WO2011018429A2] The invention relates to a device (10, 100) for storing collectibles, comprising a base unit (12) having a first receiving region (28) for receiving a first object and a second receiving region (42) for receiving a storage unit (14, 66, 76 to 82) for the collectibles (16). The base unit (12) has a first side wall (18), a second side wall (30), a connecting wall (24) connecting the side walls (18, 30) to each other, and two receiving elements (34, 36) for mounting the storage unit (14, 66, 76 to 82). The first receiving region (28) is bounded by the first side wall (18), the second side wall (30), and the connecting wall (24). The second receiving region (42), open on at least one side, is bounded by the first receiving element (34), the second receiving element (36), and the connecting wall (24) and separated from the first receiving region (42) by the connecting wall (24). The storage unit (14, 66, 76 to 82) comprises at least two segments (44 to 52, 68, 70) that can be connected to and separated from each other, wherein each segment (44 to 52, 68, 70) has a receiving region for receiving at least one collectibles (16), and wherein at least one partial region of each segment (44 to 52, 68, 70) is transparent.
