Abstract (en)
[origin: WO2011018332A1] The present invention relates to a heat exchanger (6) having at least a two-stroke cycle, including N tubes (19) distributed into two series of tubes (19), a first series of which comprises N1 tubes (19) between a first collector (21) and a second collector (22), and a second series of which comprises N2 tubes (19) between the second collector (22) and a third collector (23). A ratio of N1/N is between 15% and 50%.
