Abstract (en)

[origin: WO2011018309A2] The invention relates to a method for operating a solar cell assembly, in particular comprising organically-based solar cells, for power output therefrom, wherein output electrical power is controlled according to a defined time schedule, or at least one state quantity of the solar cell assembly is monitored in a time-dependent manner, and the output electrical power is controlled depending on captured measurement values of the state quantity.
