Abstract (en)

[origin: WO2011018499A1] The invention relates to a container (10) for receiving vouchers, comprising a housing part (12) and a cover (14) for closing an opening of the housing part (12). The cover (14) has a closure element (34) displaceably in at least one unlocking direction (P1), engaging with an engagement region (48) of the housing part (12) designed to be complementary to the closure element (34). The closure element (34) is displaceable in the unlocking direction (P1) into an unlocked state for unlocking. The container (10) further comprises a rotatably supported retaining element (58) disposed in a first position of the container (10), such that the closure element (34) can be displaced in the unlocking direction (P1) from the locked state into the unlocked state for unlocking. In a second position of the container (10) tilted by at least a minimum tilt angle relative to the first position, the retaining element (58) is rotated relative to the housing part (12) due to the weight thereof, such that a retaining region (64) of the retaining element (58) prevents the closure element (34) from displacing from the locked into the unlocked state.
