Abstract (en)  
An infant carrier (1) is comprising: a support member (2) which supports a recumbent infant; and a shoulder belt (3) which supports a front end portion (2a) of the support member to be a head support and a back end portion (2b) thereof to be a leg support in a suspended manner, wherein the support member includes a mat portion (4) for lying the infant (110) down, and the mat portion includes a back plate (10) as a interlining to retain a shape of the mat portion against a support load of the infant. The back plate includes a back support plate (11) having a back support surface (11a) which supports a back of the infant (112) and a head support plate (12) which supports a head of the infant (111), and the head support portion includes a holding portion (14) which holds a back of the head of the infant (111a) in a position recessed from the back support surface.
