Abstract (en)

[origin: EP2465397A1] The bag (1) has an inwardly folded wall section (4) held in an inwardly folded position by a holding unit (8). The holding unit is fixed in a middle region of the wall section. The holding unit is connected with the wall section by seams (9, 10). The seams connect an upper part (2), a lower part (3) and the holding unit. The holding unit is formed by an air-permeable fabric. The fabric includes an opening, which is arranged laterally offset to an inflow opening in the upper part or the lower part. An upper folding side (5) is integrally designed with the upper part. An independent claim is also included for a method for manufacturing a vacuum cleaner bag.
