Abstract (en)

A lock assembly (10) comprising a lock (20) for location within a closure and fixable relative to the closure, such that a first end portion (28) of the lock protrudes from an exposed side of the closure, and a cover member (78) that is adapted to at least impede access to the protruding, first end portion of the lock, wherein the cover member is fixable relative to the lock, by means of cooperating formations of the cover member and the lock.
