Abstract (en)

[origin: EP2466197A1] The light has a light inner area enclosed by a light housing and a light disk that is attached to the housing. A lighting unit comprising a lighting source i.e. LED, is arranged in the area for fulfilling lighting function, where a part of the housing is made from plastic. A component (01) has a set of sections (02, 04) designed as a light conductor (06) with light conductor characteristics. Another set of sections (03, 05) is designed as an optical disk (07) with optical disk characteristics, where the sections are spatially separated from each other by connection rods (08, 09).
