Abstract (en)

[origin: EP2466241A1] The exchanger (1) has a connection plate (2) for connection at a combustion engine. Tub elements (3) are soldered with each other and stacked on top of each other. The tub elements are provided directly adjacent to the connection plate and comprise lash type edges (4) that protrude outward. The edges lie against the connection plate, during mounting of the heat exchanger. The edges stiffen the connection plate, and a turbulence plate (6) is arranged between the tub elements. The edges and the connection plate lie parallel to each other.
