Abstract (en)
[origin: EP2466573A2] The lamp has luminous element (4) and light guide plate arranged in lamp housing (2). A light emitting element (8) with light output surface (84) is fixed by surface normal (N). The light emitting element is arranged, such that light from luminous element is laterally radiated into light guide plate and is returned over light output surface toward surface normal. A locking element (86') is provided in light emitting element, for locking connection to housing. The detent element is arranged within light output surface in circumscribed region (B) in projection along surface normal.
