Abstract (en)  
[origin: WO2011021134A2] The reinforcement according to the invention comprises a reinforcement layer (2) based on parallel rovings (2a) of continuous glass strands, and one or two binding layers (3) consisting of portions of fibres having a heat-meltable surface. The assembly is consolidated by penetrating fibre portions (3b) that penetrate into the heat-meltable surface, these penetrating over a part of their length into the reinforcement layer (2) and adhering to the continuous glass strands of the rovings (2a).
