Abstract (en)

[origin: WO2011020802A2] The invention relates to a refrigerator body comprising an inner container, an outer shell, and an insulating layer enclosed between the inner container and the outer shell. The outer shell comprises a metal front strip (14) on which a groove (5, 6) delimited by a guide chamfer and receiving an edge of the inner container is formed. The groove (5, 6) is divided in the longitudinal axis thereof into a first and a second segment (19, 20), wherein the width of the insertion chamfer in the second segment (20) is less than that in the first segment (19).
