Abstract (en)
[origin: WO2011020459A1] The invention relates to a pressure-measuring probe (1) for measuring pressure values of a flow, in particular a supersonic flow, comprising at least one probe head (2) which has a probe surface (8) provided with pressure-measuring points (4, 6) and which can be positioned in the flow by means of at least one probe shaft (10). According to the invention, a top side (12) of the probe head (2) and the bottom side (14) of the probe head define a wedge-shaped probe tip (16), wherein pressure-measuring points (4) are arranged at a distance from each other along the circumferential probe tip (16).
