Abstract (en)
[origin: WO2011020465A1] The invention relates to a connecting component formed by a first housing (1), in which electrical components connected to coupling elements (10) that act outwardly are arranged, and which is sheathed with an insulating sheath. For this purpose, the first housing (1) is surrounded by a second housing (16), wherein the coupling elements (10) are also fed through corresponding openings of the second housing (16), and the space between the two housings is potted with a polyurethane plastic mass. After the curing, the thus-formed housing casing (20) has an identically reproduced form of the second, outer housing (16) in only one operation.
