Abstract (en)

[origin: EP2468135A1] The furniture has a drawer (27) movably guided opposite to a furniture part i.e. furniture body, over a guide unit (24) i.e. sub lift. The guide unit includes a body rail (26) and a movement rail (25) arranged at the respective drawer and the furniture part. An adjusting device (11) adjusts the drawer in a vertical direction relative to the movement rail in a mounted condition. A contact section is provided at the adjusting device and supported at the movement rail so that an inclined adjustment of the drawer is carried out by an adjusting movement of the contact section.
