Abstract (en)

[origin: EP2468404A2] The container (1.1) has a holding unit holding a lid (11) in a holding position, in which the lid is not inserted in a sealing position, where the container is made up of polyolefin. Axial engaging units are fixedly connected with a container part (2) or lid, where one of the engaging units is aligned perpendicular to a pivotal plane defined by a pivotal path of the lid. Other engaging unit is formed on a longitudinal side of a tape hinge, where the engaging units are engaged with each other by pivoting the lid in the holding position accompanied by elastic evasive movement.
