Abstract (en)

The device has a clamp (71) mounted on a suspension unit (70) of a submersible/surface craft (12) and including arms (104, 106) moving in rotation between open and closed positions for gripping the craft. A conical docking unit (72) is mounted in rotation on the suspension unit, and receives an end of the craft so as to allow alignment of the craft with the docking unit. The docking unit is provided with an opening for passage of a cable connected to the craft. The suspension unit comprises deformable suspension columns (74, 76) extending downwardly from a horizontal main support beam (73). An independent claim is also included for a system for launching and recovering a submersible or surface craft, comprising a chassis fixed on a surface naval vehicle.

Abstract (fr)

Le dispositif de mise à l'eau et de récupération d'un engin submersible ou de surface comprend : - des moyens de suspension 70 de l'engin, - une pince 71 montée sur les moyens de suspension et comprenant deux bras 104, 106 mobiles à rotation entre une position ouverte et une position fermée de préhension de l'engin, et - un moyen d'accostage 72 monté à rotation sur les moyens de suspension et prévu pour recevoir une extrémité de l'engin de manière à permettre l'alignement de l'engin avec ledit moyen d'accostage.
