Abstract (en)
[origin: EP2468645A1] The container has bases including first and second surface regions (1, 2), where the first surface region is provided opposite to the second surface region in a direction of an inner region of the container. The first and second surface regions are connected with each other by a third surface region (3) that is formed in a form of a continuous loop belt. An intersection (6) between first and third surface regions and/or an intersection (5) between second and third surface regions are twice differentiated from each other. The container is made up of a thermoplastic material. Independent claims are also included for the following: (1) a method for constructing a base of a container (2) a blow mold comprising bases.
