Abstract (en)

[origin: EP2468971A1] The method involves custom-making a set of modules i.e. three-dimensional modules, (40) in an insulating complex remote from a building site, where the modules have shape and dimensions adapted to geometry of building and include a sealed external surface. The modules are assembled (50) on a building after the modules are transported to the site, so as to form an external insulation forming an external surface of building. The modules are associated together by using flaps extending on an edge of outside surface of the modules. Independent claims are also included for the following: (1) a computer program comprising machine instructions for implementing a method for applying external insulation of building by using insulation complex (2) a module formed in insulation complex for implementing a method for applying external insulation of building by using insulation complex.
