Abstract (en)

[origin: EP2468979A1] An overflow device (25) for water drain assemblies, in particular for drainage systems for roofs of buildings, comprises a removable overflow accessory component (30), which extends substantially along an axis (A) and which can be installed on a water drain assembly (1) for varying the level of water entering the drain assembly (1); the component (30) comprises a lower element (31) and an upper element (32), which are telescopically coupled together along the axis (A), and a height-adjustment device (33) for varying the position of the elements (31,32) with respect to one another along the axis (A), and consequently the axial height of the component (30).
