Abstract (en)
System for joining ceramic tiles for floor installations which includes a plurality of joining gaskets (3) placed between a plurality of ceramic pieces (1) and is characterized in that said joining gasket consists in a first base portion or region (31), with a flat floor, to be used as support for the assembly laid over the floor; and a second region (32), perpendicular to the first region (31) and originates from said first region (31) in the shape of an inverted wedge so that the edges or lower sharp edges (11) of the ceramic pieces (1) are housed on the vertices (33) formed between the first and second region (31,32), and fastened by the pressure exerted by a plurality of wedges placed around the perimeter of the floor.
