Abstract (en)  
[origin: EP2468989A2] The lock (1) has a lock housing (10) in which a follower (11) about an operation axis (12) is rotatably received. A spring element (13) is provided such that the follower is returned from rotational position about the operation axis to zero position. An adjusting unit (14) includes screw (15) which is connected to the spring element so that the spring bias of spring element is adjusted based on rotation of screw about rotational axis (16).
