Abstract (en)

[origin: EP2468997A2] The device has a housing (4) attached at bottom or top of a wardrobe door (2), and a motorized wheel (3) provided with an external peripheral tooth (10). The housing contains locking-unlocking units (20) arranged in any position of the door. The locking-unlocking units are associated with external rotary driving units of the wheel in direction or reverse direction for binding a spiral spring (6) to open the door by a user, or for releasing of the spring to allow self-closing of the door.
