Abstract (en)

The door has front- and cooking chamber-sided plates (2, 6) made of glass material and defining an intermediate space (7) in which a heat-conductive plate (10) is provided at a distance (A) from the front-sided plate. The heat-conductive plate has a conductive element (12) formed at its upper end section and deflecting vertically upwardly directed air flow (V) towards the cooking chamber-sided plate. The conductive element is formed by deformation of the heat-conductive plate that is made of aluminum or stainless steel and formed as a part of a cover plate (34).
