Abstract (en)  
A mobile device comprising a first portion and a second portion is provided. In at least one embodiment, the first portion comprises a first part providing at least a first display screen, and a second part providing at least a second display screen. The first part may be foldably coupled to the second part to allow the first part to fold with respect to the second part about a first folding axis. The second portion comprises a third part providing at least a third display screen. The first portion is slidably coupled to the second portion, and at least one of the first portion and the second portion comprises one or more coupling elements configured so that the second part of the first portion is foldable with respect to the third part of the second portion about a second folding axis. In one embodiment, the first, second and third parts are folded to resemble a picture frame comprising multiple digital displays.
