Abstract (en)

[origin: WO2011023462A1] The invention relates to a carrying device (10) for receiving a baby or an infant, which can be carried by a person, comprising a receiving body (20) designed so as to be cloth-like or cushion-like at least in sections, having a cloth-like or cushion-like backrest (40) at least in sections with a front side (21) facing toward the carrying person and a back side (22) facing away from the carrying person, and comprising a harness system (30) for fastening the receiving body (20) to the person. It is advantageous to have two cloth-like seating sections (50) attached to the front side (21) of the backrest (40), each having a first end (51) fastened to the front side (21) of the backrest (40) and a loose second end (52), wherein the first ends (51) of the two seating sections (50) are arranged next to one another, and wherein the second ends (52) can be detachably fastened to the backrest (40). It is noted that the seating sections (50) form a sling device T within the receiving body (20) of the carrying device (10).
