Abstract (en)

[origin: WO2010149171A1] A piece for keeping beverages cold in a drinking glass is designed as a flat body (1) with a certain thickness, where the body contains a material with great heat capacity. After cooling the body (1), e.g. in a freezer, a glass with beverage may be put on it, and the beverage is kept cold for an extended period of time, as heat from the glass is absorbed in the body (1).
