Abstract (en)  
[origin: WO2011023895A1] The invention relates a packaging assembly for vacuum packaging an item (D), such as a fluid product dispenser, the assembly including a sealed enclosure (E) for receiving an item (D) to be vacuum packaged, characterized in that said enclosure (E) includes a packaging element (21) movable inside the enclosure, the enclosure (E) being connected to a negative pressure chamber (C) including a piston (22) capable of varying the volume of the chamber (C), the packaging element (21) and the piston (22) being rigidly connected while moving, such that a movement of the piston (22) in the direction of an increase in the volume of the chamber (C) has the effect of producing negative pressure inside the enclosure (E).
