Abstract (en)

[origin: WO2011023692A1] The invention relates to packaging (1) for flexible sheet-like structures comprising a lower layer and an upper layer, which rest one upon the other along the peripheries, made of flexible, sheet-like material with a rupture pressure of at least 120 kPa, wherein a) the upper and the lower layers are connected to one another along at least 50% of their peripheries resting one upon the other, in relation to the total length of the peripheries resting one upon the other, b) at least one portion of the interconnected peripheries has segments connected to one another, and c) a further portion of the peripheries resting one upon the other is provided as an opening for the introduction of the flexible sheet-like structure.
