Abstract (en)
[origin: WO2011023615A1] The invention relates to a service box for an elevator system. The service box comprises a base element (6). The service box comprises a door (3) located in a first plan in a closed state. The service box comprises at least one lifting device (12) connected to the base element (6) and the doors (3), and by means of which the door (3) can be displaced from the first plane into a second plane, wherein the first and the second planes are substantially parallel to each other. The door (3) can be displaced into the second plane for opening the service box.
