Abstract (en)

[origin: EP2471391A2] The cutting device (10) comprises a blade carrier (11) with a blade holder (12), in which a blade (13) is arranged in radial direction in an adjustable manner. A drive shaft is provided, which is assigned to the blade carrier for rotating a drive of the blade carrier around a rotation axis. An adjustment unit (21) is assigned to a grinding disk holder (19) for automatic adjustment of the position of the grinding disk holder corresponding to the blade carrier. An independent claim is also included for a method for position adjustment of a grinding disk holder of a grinding unit in a cutting device for an extrusion machine in a tobacco processing industry.
