Abstract (en)
Ski boot (1) comprising a rigid shell (2) and a rigid cuff (5) hinged to the shell (2) about a first transversal reference axis (A) coincident with the articulation axis of the ankle of the user. A cuff locking device (9) is structured to rigidly fix the cuff (5) to the shell (2) or to release the cuff (5) from the shell (2) so as to allow the cuff (5) to pivot freely about said first reference axis (A); the cuff (5) comprising of a rigid front greave (12) and a rigid rear greave (13) adapted to mutually couple one another so as to form a rigid and detachable tubular body (5); the rigid rear greave (13) being hinged to the shell (2) and being mechanically constrained to the shell (2) by means of the cuff locking device (9); the rigid front greave (12) being instead hinged to the rigid rear greave (13) about a second reference axis (A,C) to be able to tilt forward in an independent manner from the rigid rear greave (13).
