Abstract (en)  
There is provided an elevator operating panel capable of saving the space, reducing the cost, and improving the design. For this purpose, the elevator operating panel is configured so as to include a touch panel provided in at least one of a hall and a car of an elevator and a display controller for causing an operation screen of the elevator to be displayed in a display part of the touch panel. The touch panel has a scanner function and takes in a fingerprint of a user by means of the scanner function when a finger of the user touches the display part. The display controller identifies a fingerprint based on the user's fingerprint taken in by the touch panel and causes the operation screen of the elevator according to the user specified by the fingerprint identification to be displayed in the display part of the touch panel.
