Abstract (en)
[origin: EP2471984A1] To provide a flat knitting machine capable of further enhancing knitting efficiency than the related art. Half pressers (7, 8) are each divided into two, an outer side divided presser (7A, 8A) at a position away from a center line of a cam system (200) and an inner side divided presser (7B, 8B) at a position close to the center line, where each divided presser (7A, 7B, 8A, 8B) is configured to be switchable to an acting state (state of acting on selecting butt (31)) and a non-acting state (state of not acting on selecting butt (31)) independent from each other. When the outer side divided presser (7A) is in the non-acting state, a position where the selecting butt (31) is sunk into the needle groove by the inner side divided presser (7B) is shifted towards the center line of the cam system (200).
