Abstract (en)  
The dryer or machine has a rotatable drum (2) for accommodating clothes. A vaporization device supplies vapor into a chamber (3) i.e. barrel, containing the drum. A controller (10) activates the vaporization device and rotates the drum in the vaporized chamber with more than 800 rotation per minute. A water supply unit supplies water into the chamber. A heater (12) heats the water present in the chamber for producing vapor in the chamber. A tank is connected with the chamber for accommodating process water. The controller supplies detergent from a detergent chamber into the chamber. An independent claim is also included for a method for operating a laundry dryer or an automatic washing machine.
