Abstract (en)
[origin: US2012134794A1] To provide an air-conditioning apparatus that is provided with an air-sending device that includes: a housing; a fan that is disposed in the housing; a casing that guides an airflow, the casing arranged adjacent to the back side of the fan; and a stabilizer that stabilizes the circular vortex, the stabilizer arranged adjacent to the front side of the fan. When $\delta=A/D$ expressed by an air flow inlet port width A and a fan diameter D is 2 or lower, an outer peripheral blade inflow angle $\beta=\delta \times \gamma$ radian is in the range of $0.4 \leq \gamma \leq 0.3$. The air-conditioning apparatus provided with an air-sending device is capable of suppressing noise as well as increasing fan performance even when the inlet port is narrow.
