Abstract (en)

[origin: EP2472205A2] The present invention relates to a cooling device (10) comprising an ice machine (12) assembled inside the liner (11) of the cooling device (10); and in order to obtain an additional storage region (50a, 50b) on at least one side of said ice machine; a lower shelf (20) positioned under the ice machine (12); at least one fixation piece (40) which is connected to the inner lateral surface of the liner (11) or to the ice machine; and at least one cover (30) which is hinged to the fixation piece (40) so as to provide access to said storage region (50). Said cooling device is characterized in that, said cover (30) is sized so as to cover at least one storage region (50a, 50b) and the ice machine (12) from the front side thereof.
