Abstract (en)

[origin: WO2011026731A1] The invention relates to a multilayer sheet material (20) in the form of a printing blanket having a printing layer (21) made of a polymer material, at least one compressible layer (22, 23), and at least one reinforcing base layer (24, 25), the individual layers forming a bond with each other, characterized in that the printing layer (21) has an additional coating (27) locally bounded at at least one location of the printing layer (21) and completely preventing ink transfer at said locally bounded location, wherein the additional coating (27) is built up of at least one resin and/or at least one paint and/or at least one polymer. The invention further relates to a method for producing such a multilayer sheet material (20).
