Abstract (en)

[origin: WO2011023875A1] The invention relates to a vehicle, in particular a motor vehicle, comprising at least one electric traction machine powered by an electric power supply module (10) and a circuit for cooling the hot air generated by said power supply module (10), said cooling circuit comprising air inlet (14) and outlet (15) ducts connected to the power supply module (10), an air pulser (16) accelerating the circulation of air at the outlet of the outlet duct (15) and an air extraction duct (17) discharging the air from the pulser (16) toward the rear of the vehicle, characterized in that the air discharge duct (17) is arranged such that the air outlet (171) of the discharge duct (17) projects beneath the floor (9) of the vehicle.
