Abstract (en)

[origin: WO2011023388A1] The subject matter of the present invention is a machine, in particular a container treatment machine, with at least one machine element (1), and with at least one associated covering (2) which completely or partially covers the machine element (1). According to the invention, a supporting framework (4, 5) consisting of columns (4) and crossmembers (5) which are connected to one another in a centring manner at node points (6) is provided for holding the covering (2).
