Abstract (en)
[origin: WO2011026176A1] The present disclosure provides a tactile marker that has a head portion arranged to sit on a walkway surface and a depending stem arranged to be located as a press fit within a hole in the walkway. The head portion has a tactile surface and comprises a first material that has a recess at the tactile surface. The head portion further comprises a second material that is disposed in the recess and the second material comprises a frictional component that forms at least a portion of the tactile surface. The depending stem comprises at least one barb that has a generally annular land and a generally conical portion. The depending stem comprises at least one sealing ring arranged to seal the hole in the walkway when the depending stem is located therein.
