Abstract (en)
[origin: WO2011026947A1] A four-path and three-position distribution valve (1) that controls a hydraulic actuator (A, B) in an operating machine, comprises a valve body (2) in which a pressure compensator (8, 15) is integrated that maintains the fluid flow constant as the load varies on the actuator (A, B). The valve (1) has reduced dimensions and is used in a modular system for controlling various actuators.
