Abstract (en)
[origin: WO2011027226A2] The invention relates to an extruded profile member for a solar panel frame, characterised in that said profile member comprises a cross-section defined by the surfaces (1), (3) and (5) for forming, after being shaped typically by being folded and clamped, a U-shaped cross-section for supporting the panel (6) therein, and produced in a more open manner during the extrusion, such that said cross-section enables the panel (6) to be positioned on one of the surfaces (1), (3) or (5), typically (5), without the panel (6) touching the other surfaces, typically (1) and (3), during said positioning process. The invention also relates to a solar panel frame made from such profile members.
