Abstract (en)
[origin: EP2474261A2] The method involves heating the liquid by using an electrical heater (11) and a condenser (4) of a heat pump (1). The condenser of the heat pump is outweighed during the execution of cleaning program section. The condenser is operated together with the electric heater, during the execution of rinse program section. The liquefaction of about 90% of the total heating power is provided by the cleaning program section. A washing tub (13) of the cleaning program section, is heated to about 50[deg] C.
