Abstract (en)

[origin: EP2474658A1] The washing machine has actuating unit that actuates locking device (21) for unlocking or opening door. A control unit is connected to sensors (17b) to disable a function of detected sensor signal. The control unit is provided with microcontroller (22) for controlling actuators for executing laundry treatment program and for enabling or disabling the locking device in response to detected signals. The operation of microcontroller is monitored by monitoring microcontroller (23) to activate the operation of locking device.
